

Anatomy Questions

1. Which of the following does not rotate the femur?
 - a. piriformis
 - b. obturator externus
 - c. gemellus superior
 - d. quadratus femoris
 - e. teres major

2. One of the origins of the pectoralis major originates on the anterior surface of the medial half of the clavicle.

True False

3. The action of the soleus is...
 - a. dorsi flexion of the foot at the ankle
 - b. everts the foot at the ankle
 - c. plantar flexion of the foot at the ankle
 - d. gives medial ankle stabilization

4. Which of the following muscle(s) flexes the thigh at the hip?
 - a. latissimus dorsi
 - b. psoas major
 - c. popliteus
 - d. iliacus

5. The middle deltoid...
 - a. abducts the humerus at the shoulder
 - b. abducts and laterally rotates the humerus at the shoulder
 - c. depresses clavicle, pulls it inferiorly and anteriorly
 - d. elevates and rotates scapula upward

6. The brachialis originates on the radius.

True False

7. Which of the muscles is not one of the Rotator Cuff Muscles?
 - a. teres minor
 - b. teres major
 - c. subscapularis
 - d. infraspinatus

8. The femur articulates with which of the following structures?
 - a. glenoid fossa
 - b. calcaneus
 - c. acetabulum
 - d. ischial tuberosity

9. The sternocleidomastoid acting unilaterally rotates the head.

True False

10. The gracilis inserts on...
 - a. the anterior and medial surface of the shaft of the tibia
 - b. middle third of medial lip of linea aspera
 - c. on a line extending from lesser trochanter to upper part of linea aspera
 - d. lateral portion of radius
